

The Top 10 Reasons You Need to Replace Your HVAC System

EFFICIENCY

Your AC or furnace running too often could be sign it isn't working correctly.

NOISE

If your heating and cooling systems are noisy you might need a replacement.

DUST

If your home has too much dust it could indicate leaky ducts.

HUMIDITY

Poor ductwork can make your home too dry in the winter and too humid in the summer.

TEMPERATURE

If some of your rooms run cold while others are warmer, it could signal time for a replacment.

REPAIRS

If your HVAC requires a lot of repairs it may make sense to replace it.

BREAKDOWNS

If your system has a breakdown you may be able to repair it, but sometimes it is more sensible to replace it.

CARBON MONOXIDE

Older furnaces can develop heat cracks in their heat exchanger. These cracks can let carbon monoxide into your home.

AGE

If your system is more than 10 years old it may need to be replaced.

ELECTRICTY

If your system creates electrical issues it should be replaced for safety reasons.
